

AI TRANSFORMATION PARTNER

Building Intelligent Software.

AI Consulting · Agentic Automation · Custom Enterprise AI
Software

01 — WHO WE ARE

About Pradrix

Pradrix is an AI transformation partner for ambitious, technology-driven companies. We combine strategic consulting with hands-on engineering to help organizations move beyond experimentation and put artificial intelligence to work inside real operations, real products, and real revenue lines.

Our team designs and builds agentic AI systems, custom software, and automation pipelines that are engineered for production from day one — not proofs of concept that stall after the demo. We work as an embedded partner, translating business objectives into shipped, measurable AI capability.

Every engagement is built on the same principle: intelligent software should be dependable, explainable, and built to compound in value over time.

FOUNDED
2026

AI SOLUTIONS BUILT
10+

DELIVERY MODEL
Strategy → Build → Scale

CORE DISCIPLINE
Agentic AI-Native
Engineering

Consulting + Engineering

One accountable partner, start to finish.

Production-Grade Delivery

Built to run in live enterprise environments.

Compounding Systems

Software designed to improve with use.

02 — WHAT DRIVES US

Vision & Mission

VISION

A future where every enterprise operates on intelligent systems — where AI is infrastructure, not a side project.

MISSION

To design and build agentic AI and enterprise software that turns ambitious strategy into dependable, everyday operating capability.

CORE VALUES

Excellence

We hold engineering and craft to a consulting-grade standard.

Integrity

Transparent scoping, honest timelines, no overselling AI.

Ownership

We treat client outcomes as our own accountability.

Innovation

Applying frontier AI with engineering discipline.

Partnership

Embedded, long-horizon relationships over one-off projects.

03 — THE LANDSCAPE

Why AI, Why Now?

AI has moved from a research curiosity to a board-level mandate. The organizations pulling ahead are not the ones running the most pilots — they are the ones who have moved AI out of the sandbox and into their core workflows, decision-making, and customer experience.

AI Adoption

88%

of organizations report regular AI use in at least one business function.

Source: McKinsey, State of AI 2025

AI Agents

62%

of organizations are experimenting with AI agents — signaling the shift from AI assistance to AI-powered execution.

Source: McKinsey, State of AI 2025

Agentic AI Growth

33%

of enterprise software applications are expected to include agentic AI capabilities by 2028.

Source: McKinsey, State of AI 2025

THE SHIFT

PHASE 01

Experimentation

Isolated pilots, chat interfaces.

PHASE 02

Integration

AI embedded into existing tools.

PHASE 03

Automation

Workflows run with minimal oversight.

PHASE 04

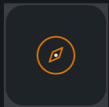

Agentic Operations

Autonomous agents run the business layer. **Pradrix builds here.**

04 — WHAT WE DO

Services

A full-stack capability spanning strategy, engineering, and integration — one partner across the entire AI delivery lifecycle.

AI Consulting & Strategy

Readiness assessments, use-case prioritization, and a practical roadmap from opportunity to ROI.

AI Automation

Automating operational workflows — from data entry to decisioning — with measurable time and cost savings.

Agentic AI Systems

Multi-step autonomous agents that plan, act, and self-correct across tools and business systems.

Custom AI Software Development

Bespoke applications and internal platforms engineered around your data, workflows, and constraints.

AI Integration

Embedding AI capability into your existing CRM, ERP, and product stack without disrupting operations.

Enterprise AI Solutions

Governed, secure, and scalable AI infrastructure built for enterprise compliance and reliability.

05 — WHO WE SERVE

Industries

Our engineering approach adapts to each sector's data, regulation, and operating rhythm.

SaaS & Software

Ship AI features and copilots without slowing your core roadmap.

Financial Services

Automate underwriting, reconciliation, and reporting with auditable AI.

Healthcare & Life Sciences

Streamline documentation and operations while respecting compliance.

Retail & E-commerce

Personalization, demand forecasting, and support automation at scale.

Manufacturing & Energy

Predictive operations and intelligent monitoring across the value chain.

Professional Services

Agentic research, drafting, and client-delivery workflows that save billable hours.

06 — HOW WE WORK

Our Process

A disciplined six-stage delivery pipeline— from first conversation to long-term support.

DELIVERY PRINCIPLE

Every phase ends with a working artifact, not a slide — so progress is always visible and testable.

07 — OUR EDGE

Why Choose Us

— DIFFERENTIATORS

Agentic-native architecture

Built for autonomous, multi-step reasoning — not chatbot wrappers.

Strategy-to-code continuity

The team that plans the roadmap also ships it.

Production-first engineering

Reliability, monitoring, and scale considered from day one.

Embedded partnership model

We integrate with your team, not sit outside it.

— CLIENT BENEFITS

Faster time-to-value

Working systems in weeks, not annual initiatives.

Lower operational risk

Governed, monitored systems built for enterprise trust.

Compounding efficiency

Automation that keeps paying back after go-live.

A single point of accountability

One partner across strategy, build, and support.

08 — WHAT WE BUILD WITH

Technology Stack

A modern, enterprise-ready tool chain selected for reliability and speed of iteration.

AI & LLMs

OpenAI · Claude ·
Gemini · Open-Source
LLMs · LangChain ·
LangGraph · RAG · AI
Agents

Cloud & Infrastructure

AWS · GCP · Vercel ·
Docker · Kubernetes ·
Cloud Storage ·
Serverless

Frontend

React · Next.js ·
TypeScript · JavaScript ·
Tailwind CSS

Backend

Python · FastAPI ·
Node.js · REST APIs ·
WebSockets · Supabase

Data

PostgreSQL · MongoDB
· Supabase · Vector
Databases · Redis · ETL
Pipelines

DevOps & MLOps

GitHub Actions · CI/CD ·
MLflow · DVC · Docker ·
AWS

09 — HOW WE PARTNER

Engagement Models

Three ways to work with Pradrix, matched to where you are in your AI journey.

MODEL 01

Project-Based

A defined AI solution, scoped and delivered against clear milestones and a fixed outcome.

Best for: a specific automation, tool, or MVP.

MODEL 02

Dedicated Team

An embedded Pradrix pod working inside your roadmap on a continuous, retained basis.

Best for: ongoing product and platform development.

MODEL 03

AI Transformation Partner

A long-term strategic partnership covering strategy, build, and organization-wide AI enablement.

Best for: enterprise-wide AI transformation.

10 — SOLUTIONS WE'VE BUILT

Representative Solutions

A selection of AI-powered systems and intelligent software solutions that demonstrate our technical capabilities and approach to solving real-world problems.

AI & AUTOMATION

Intelligent Voice Authentication & Safety System

A voice-enabled security and monitoring system combining voice authentication, edge devices, AI models, and cloud infrastructure to create a responsive and intelligent safety solution.

Technologies: Raspberry Pi · FastAPI · AI/ML · MongoDB · Supabase · Redis

FINTECH / SOFTWARE

Real-Time Paper Trading Platform

A high-performance trading platform designed around real-time order matching, market data, portfolio management, and an interactive trading experience.

Technologies: C++ · FastAPI · React · PostgreSQL · Redis · WebSockets

AI-POWERED PLATFORM

AI Resume & Skill Gap Intelligence

An AI-powered system that analyzes resumes against job requirements, identifies skill gaps, and generates structured insights using semantic matching and vector-based retrieval.

Technologies: Python · LLMs · Embeddings · Vector Search · PostgreSQL · FastAPI

FROM CONCEPT TO PRODUCTION

We combine AI engineering, software development, automation, and cloud infrastructure to turn complex ideas into deployable digital solutions.
